PROFESSIONAL SUMMARY

Second-year B.Tech CSE (AI & ML) student building production-grade, AI-integrated applications across native macOS, full-stack web, and browser-extension platforms. Experienced designing LLM pipelines, RAG systems, and real-time async architectures in TypeScript, Swift, and Python; extensions and apps in active use by 150+ real users.

EDUCATION

B.Tech, Computer Science (AI & ML) — Polaris School of Technology, Bangalore

2025 – 2029 | CGPA: 7.8

PROJECTS

TypeFlux — Native macOS AI Copilot

Swift, SwiftUI, AppKit, macOS Accessibility APIs, OpenAI / Anthropic LLMs | www.type-shit.app/

- Developed a native macOS utility that runs invisibly in the background, using the Accessibility API (AXUIElement) to capture and inject text across any active application.
- Engineered an asynchronous, streaming LLM pipeline with Swift Concurrency (async/await) to process text and voice input through Anthropic and OpenAI models in real time.
- Built a menu-bar AppKit architecture (LSUIElement) handling focus stealing and dynamic floating-panel injection over full-screen apps.
- Integrated SFSpeechRecognizer for hands-free voice dictation and screen-capture tools to pass visual context into the AI pipeline; packaged with ad-hoc signing and Sparkle-based OTA updates.

ChessWise — Personalized AI Chess Coach & Adaptive Training Platform

TypeScript, Node.js, Google Gemini, pgvector, PostgreSQL, Prisma, BullMQ, Redis, Stockfish 18 | chesswise-web.vercel.app/

- Architected a closed-loop generative AI coaching engine combining deterministic Stockfish evaluations with Google Gemini to produce plain-English blunder explanations with zero hallucinations.
- Built an asynchronous distributed analysis pipeline (BullMQ, Redis) to process multi-ply game PGNs, computing move-by-move centipawn loss and accuracy scores.
- Designed a metadata-filtered RAG pipeline using pgvector and Gemini text-embedding-004 to retrieve historical blunder patterns for context-grounded chess mentorship.
- Implemented an adaptive training system using the SM-2 spaced-repetition algorithm to convert player blunders into scheduled, personalized puzzle drills.

LLM Council — Multi-Model AI Comparison Chrome Extension

JavaScript, Chrome Extensions API | 100+ active users | [Chrome Web Store ↗](#)

- Built a productivity extension that broadcasts a single prompt to all open AI chat tabs (ChatGPT, Gemini, Claude) simultaneously, using existing browser sessions with no API keys required.
- Engineered an AI Judge system that automatically scores and ranks each model's response on accuracy, depth, and clarity to surface the best answer instantly.
- Shipped one-click export (PDF, PNG, Markdown, HTML, plain text), prompt templates, dark/light themes, keyboard shortcuts, and optional Google Sync for cross-device settings.

Universal Chat Cleaner — Bulk Chat Management Extension for AI Platforms

JavaScript, Chrome Extensions API | 50+ active users | [Chrome Web Store ↗](#)

- Built a Chrome extension enabling bulk select, archive, and delete of conversation history across 14+ AI chat platforms (ChatGPT, Gemini, Claude, and others) from a single interface.
- Integrated directly with each platform's own API for near-instant bulk actions, avoiding slow DOM-simulated clicking, with a checkbox-based multi-select and Select-All toggle.
- Designed with a privacy-first architecture — all processing runs client-side within the user's existing browser session, with no accounts, subscriptions, or data collection.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Swift, Go

AI/LLM: OpenAI & Anthropic APIs, Google Gemini, RAG pipelines, pgvector embeddings, prompt engineering, Zod schema validation

Frameworks & Platforms: React, Next.js, Node.js, SwiftUI, AppKit, Tailwind CSS, Prisma ORM

Data & Infra: PostgreSQL, MongoDB, Redis, BullMQ, AWS S3, Docker, Turborepo

Tools: Git, GitHub, Postman, Chrome Extensions API, CI/CD
